

## myscot or my smart community online today ...

is a simple to use drag and drop CMS editor that was developed for users that want to concentrate on producing content without having to concern themselves with all the technical aspects of HTML programming.

The editor provides pre developed snippets or content blocks that are optimised for delivery of responsive content. That is the content is automatically displayed correctly on all devices from mobile phones to larger Smart TV's.

With over 300 pre made snippets that can be dragged and dropped into position in any order, the system creates a modern responsive website to suit any needs.
